

Undergraduate Final Year Project Proposal

Automation testing framework implementation in real project

Nguyen Thanh Tung

Computer science

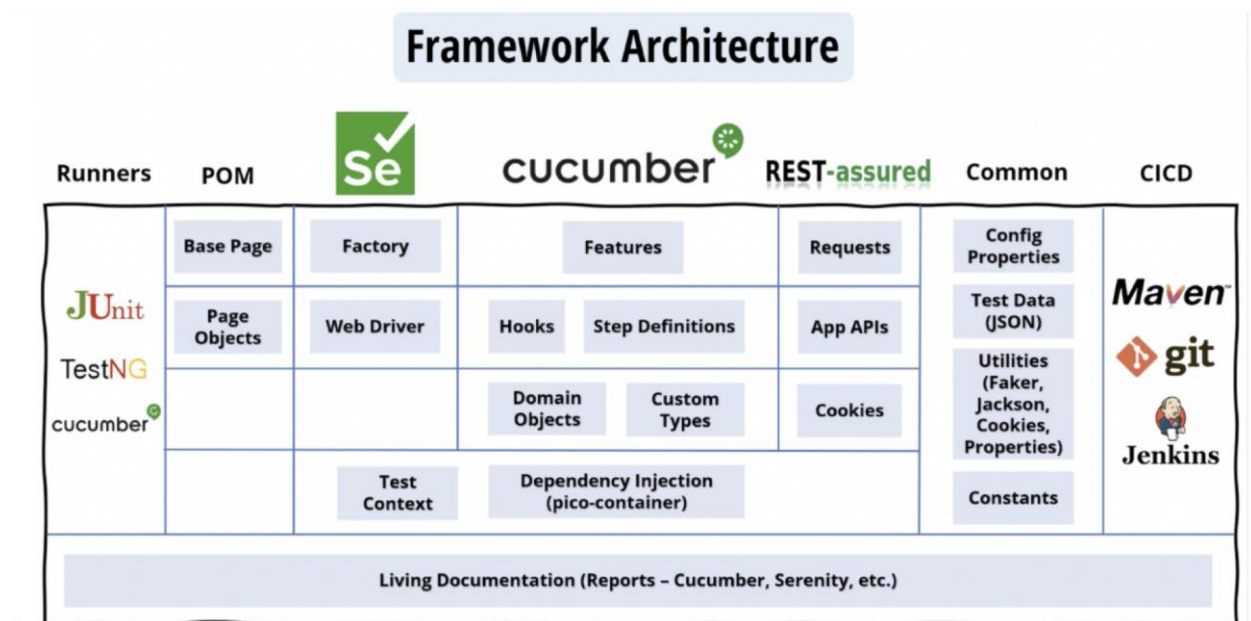

001245270

1 Overview

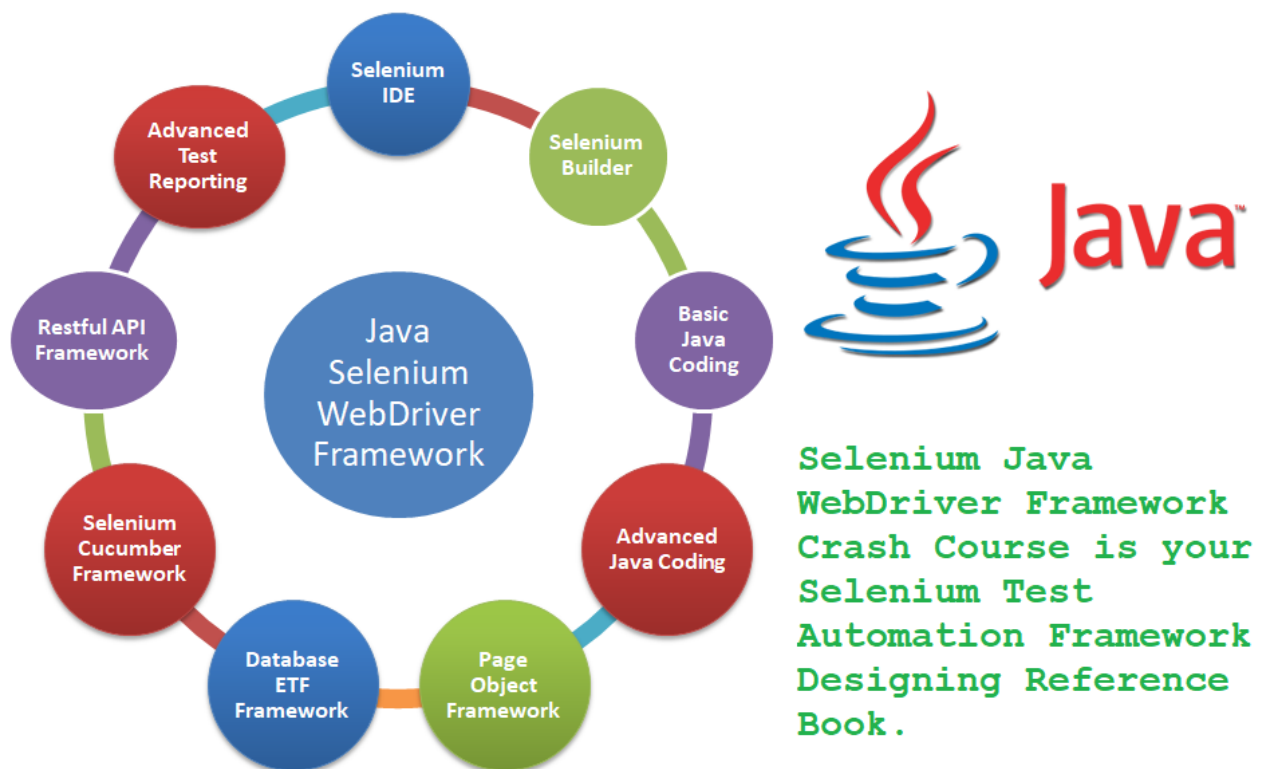

In recent years, aside from the progress and development of software engineering, software testing, or automation testing, has risen to the top of the work career ladder. I spent the last year as an intern at Harvey Nash, a pioneer in professional recruitment and an IT website. And they want me and other interns/Rookies to learn and develop a multilingual code for an auto testing product for their project and sites such as QA and QC.

2 Aim

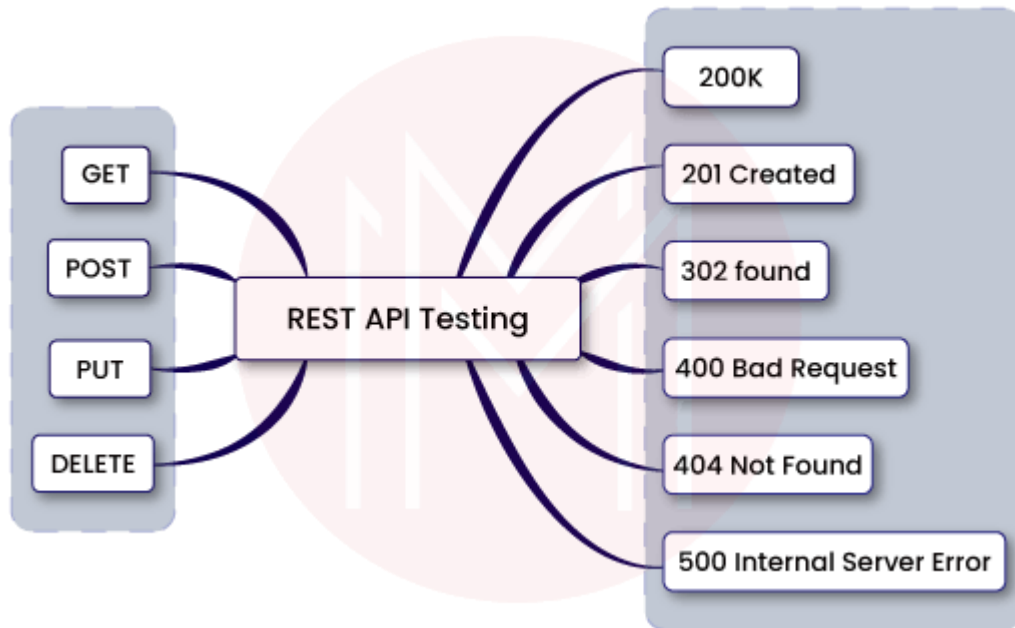

To provide necessary skills sets, basic knowledge about software testing and automation testing for new members to be able to design and implement test scripts:

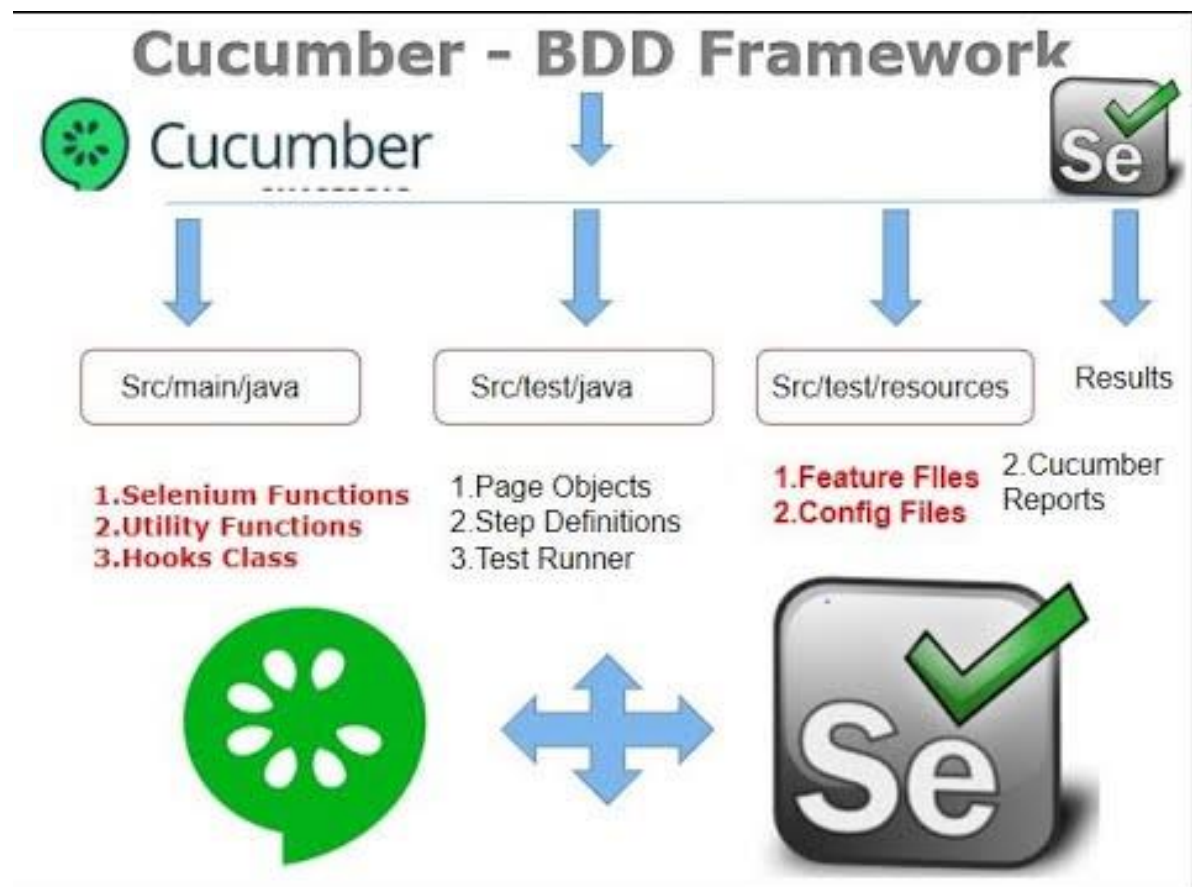

Selenium IDE java

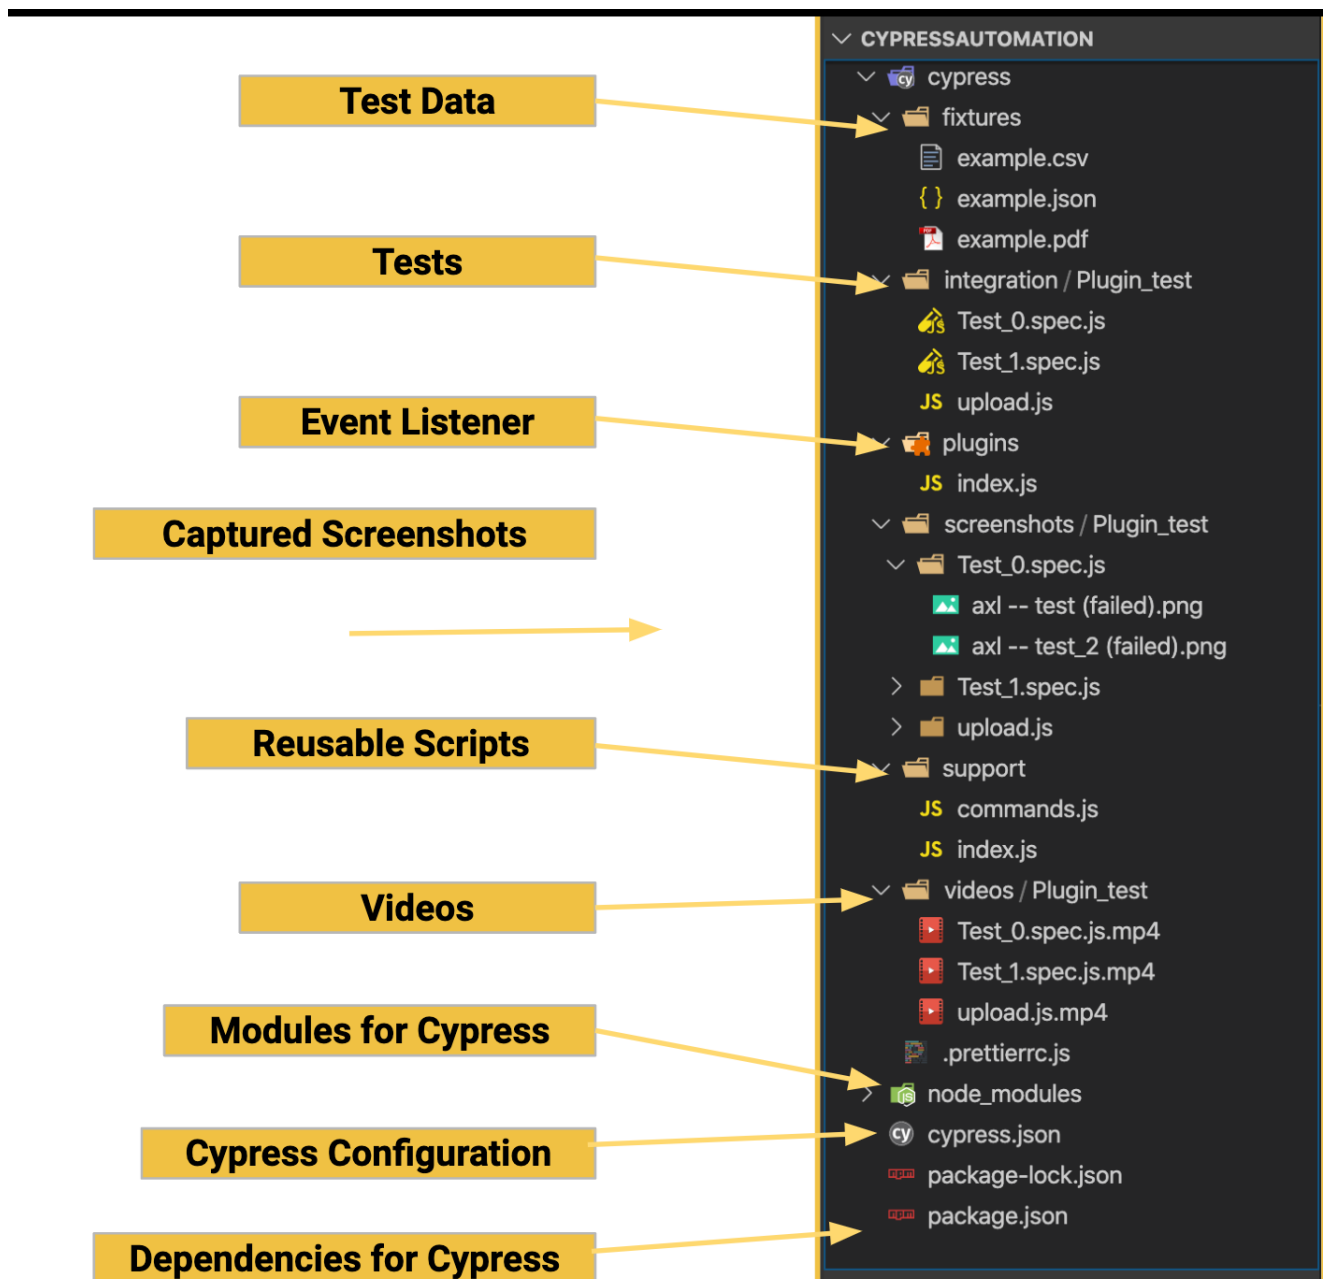

API Testing With Rest Assured – TestNG

Selenium With Webdriver - TestNG, Cucumber

Cypress framework

3 Objectives

- Trainees understand overview of software testing. Trainees know overview of automated testing and UI automated testing. Trainees know how to get good locators. Trainees use basic Git commands in work. Trainees understand Page Object Model. Trainees can use Selenium IDE to record, playback and implement test scripts for UI automated testing. Trainees (Manual Tester) can use Cypress Framework to implement test script for smoke and regression test. Understand and be able to do

API testing and UI Testing using Selenium with BDD framework to test a web application in Java language.

LIMITATION

This course is designed to train automation testing in Java language.

Privacy

Wrong access to personal information is a problem that frequently draws your attention to the term "privacy." This section examines privacy from the perspectives of data aggregation, location privacy, public information, and Internet technologies.

Data fusion

Unauthorized access to information might be considered a violation of privacy. As environmental databases grow, in complexity, and connection, software initiatives that combine data or knowledge sources must examine the data's ethical implications. Identify and discuss any legal, social, ethical, or professional difficulties or concerns that may arise because of this proposed initiative.

4 Planning (see appendix A)

The project will be developed agile SDLC because agile is an environment for development, especially with projects that are not well-planned.

APPENDIX A - SCHEDULE OF WORK

<i>SPRINT</i>	<i>TASKS</i>	<i>DURATION</i>	<i>START</i>	<i>STORY POINT</i>
SPRINT 1	Learning how to use GitLab and Microsoft Azure	1 week	June 1st	10
SPRINT 2	1. What is GIT?			5
	2. Why GIT?			4
	3. GIT basic			6
	4. Azure Microsoft CI CD			2
	What is UI automation? Trainees understand the basic concept of automation, the benefit of automation testing and automation testing layer	2 week	June 8th	10
	1. What is UI automation?			5
	2. Automation vs Manual			4
	3. Automation testing layers			6
	4. Common automation frameworks			2
	5. Automation tools			10

SPRINT 3	Selenium IDE how to use Selenium IDE to record, playback and custom test scripts	2 week	10
	1. Test Automation Tools/Frameworks?		5
	2. Common UI testing tools		4
	3. Headless/Headed Browser		6
	4. Mobile Automation Approaches		2
	5. Locator Strategy		10
	6. Distributed Testing		5
	7. Visual Validation		
SPRINT 4	Selenium Java with TestNG Trainees can use Selenium WebDriver to implement test scripts for functional testing.	2 week	10
	1. What is Selenium IDE?		5
	2. Features of Selenium IDE		4
	3. Using Selenium IDE		6

SPRINT 5

Selenium Java with TestNG Trainees can use Selenium WebDriver to implement test scripts for functional testing. 2 week 10

- 1. Create Maven project 5
- 2. Add dependencies library to project 4
- 3. Create project structure? 6
- 4. Create System Configuration 2
- 5. Create page objects classes 10
- 6. Create test classes 5

SPRINT 6

Page Object Model 2 week 10

- 1. What is POM? 5
 - 2. Why to use POM? 4
 - 3. How to implement POM? 6
 - 4. POM Structure 2
- 10

SPRINT 7	API Testing with Rest Assured Trainees understand overview of API testing and how to do API test	2 week	10
	1. Create Gest project		5
	2. Create project structure?		4
	3. Create System Configuration		6
	4. Create page objects classes		2
	5. Create test classes		10
SPRINT 8	Selenium with Cucumber Trainees know BDD and how to apply it into UI Testing	2 week	10
	1. Create Cucumber project		5
	2. Create project structure?		4
	3. Create System Configuration		6
	4. Create page objects classes		2
	5. Create test classes		10
			5

SPRINT 9

Cypress Trainees understand Cypress and apply it into UI functional testing

2 week

- 1. Cypress Overview
- 2. Cypress Basic
- 3. Cypress Advance
- 4. Cypress With Cucumber
- 5. Create project structure?
- 6. Create System Configuration
- 7. Create page objects classes
- 8. Create test classes
